

# CKA/CKAD : Complete Certification Guide

Demo : Deployment

# Deployment

- **Deployment** : Create Deployment using File.

```
kubectl apply -f filename
```

- Creating Deployment "Imperatively".

```
kubectl create deployment NAME --image=[IMAGE-NAME]  
--replicas=[NUMBER]
```

```
kubectl create deployment NAME --image=[IMAGE-NAME]  
--replicas=[NUMBER] --dry-run=client
```

# Deployment

- **Deployment** : Get running deployments.

```
kubectl apply -f filename
```

- Creating Deployment "Imperatively".

```
kubectl create deployment NAME --image=[IMAGE-NAME]  
--replicas=[NUMBER]
```

```
kubectl create deployment NAME --image=[IMAGE-NAME]  
--replicas=[NUMBER] --dry-run=client
```

# Deployment

- **Deployment** : Get details of Pods running by Deployent.

```
kubectl get pods --show-labels
```

```
kubectl get pods -l [LABEL]
```

# Thank You...

Don't be the Same! Be Better!!!
