

CKA/CKAD : Complete Certification Guide

Service Accounts in Kubernetes

- **Service Accounts**: Service account provides an identity for processes that run in a Pod.

CKA/CKAD Certification

- Every namespace contains **Default** service account.
- Service Accounts cannot be used across the namespace.

CKA/CKAD Certification

Syntax : `kubectl create service account [NAME] [NAMESPACE]`

```
kubectl create service account sa-lb -n app-loadbalancer
```

```
apiVersion: v1
kind: ServiceAccount
metadata:
  name: build-robot
  Namespace: app-loadbalancer
```
