# CKAD : Complete Certification Guide

Push Custom Images on DockerHub

CKAD : Certification

➢ Pull docker Images -
  ○ `docker` `pull` `<image_name>:<image_tag>`

➢ Docker tags are used to version the docker Image.

➢ Image Can be Tagged explicitly with the Help of Tag Command:
  ○ `docker` `tag` `SOURCE_IMAGE:TAG` `TARGET_IMAGE:TAG`
  ○ If tag is not defined by default "latest" tag attached to Image.

CKAD : Certification

➢ To upload the image, user must have the account on Docker Hub.

➢ Docker Hub is native registry for Docker Images. Which have docker public & private images.

➢ Push Docker Image. User must login first.
```
docker login
```

CKAD : Certification

➢ Push Image on Docker Hub.

```
docker image push USER_NAME/IMAGE_NAME:Image_Tag
```

Thank You...
