CKA/CKAD : Complete Certification Guide

Service Type: NodePort

➢ Node Port service Open the Port on Worker Node. It exposes the Service on each Node's IP at a static port.

➢ A ClusterIP Service, to which the NodePort Service routes, is automatically created.

➢ User will be able to contact the NodePort Service, from outside the cluster, by requesting <NodeIP>:<NodePort>

➢ By default and for convenience, the Kubernetes control plane will allocate a port from a range (default: 30000-32767)

Thank You...
